WHAT THIS IS

A top-down estimate of the EBITDA this business could recover through pricing decisions already inside management’s control, built from published divisional accounts plus clearly labelled assumptions. It is sized as three levers: how base prices are set, what customers actually pay, and what reaches the invoice.

HOW EACH FIGURE IS BUILT

Every intervention is one line of arithmetic. The share of revenue it can reach, times the price move expected on that revenue, times the share of that move still open today. All three are printed where the figure appears, so each can be argued with on its own.

WHAT IT IS NOT

Not a forecast and not a commitment. No volume growth, no new customers, no new products and no cost programme are assumed anywhere. Every input carries a status, and that status sets the width of the confidence interval.

EXECUTIVE SUMMARY

Price gave away £75m of EBITDA last year. £27m of it is recoverable without a single new customer.

Synthomer plc reported a 7.8% EBITDA margin on £1,739m of revenue in FY2025. Structural analysis of the divisional accounts points to £18m–£36m of recoverable EBITDA, or 1.56% of revenue, from three sets of pricing decisions already inside management's control. Capturing the midpoint would move group margin to 9.4%, roughly 22% of the distance to the stated 15% ambition. No new customers, no new products and no volume growth are assumed anywhere in this figure.

WHAT IT IS WORTH	WHERE IT COMES FROM	HOW FIRM IT IS
£18m–£36m Annualised EBITDA, midpoint £27m. Stated as a range because the inputs support a band, not a point.	£13m / £7.1m / £8.7m Levers A, B and C before the £1.7m netted off where A and B would claim the same revenue twice.	±32% Confidence interval on the estimate, set by how much of the input is reported rather than estimated. A separate top-down maturity rating gives 5.9 margin points. At the group's 7.8% margin, 1% of revenue taken in price is worth about 13% of EBITDA.

EXHIBIT 2Uplift by division, ranked

DIVISION	REVENUE	MARGIN	REACHABLE	UPLIFT	RANGE	CI	LEVER MIX
Coatings & Construction Solutions	£699m	9.2%	10.8%	£11m	£7.6m–£15m	±32%	
Adhesive Solutions	£571m	11.6%	13.1%	£9.0m	£6.2m–£12m	±32%	
Health & Protection and Performance Materials	£469m	5.2%	6.6%	£6.9m	£4.7m–£9.1m	±32%	

Lever mix shows the share of each division's uplift arising from A, B and C. Ranked by uplift, not by revenue.

BASE PRICE • BP	POCKET PRICE • PP	THE RANGE	WHAT IS EXCLUDED
The list or reference price before negotiation. Interventions tagged BP move this.	What actually lands after discounts, surcharges and unbilled service. Tagged PP.	A confidence interval driven by input status: width is set by how much of the input is reported rather than estimated, and narrows as data improves.	No volume growth, no new customers, no new products, no cost programme. Price decisions only.

DIVISION 1 OF 3 • COATINGS & CONSTRUCTION SOLUTIONS

CCS's largest opportunity is how base prices are set, worth £5.6m a year.

Coatings & Construction Solutions earned 9.2% EBITDA margin on £699m of revenue in FY2025, against 12.2% as recently as 2023. Realised price per unit moved –5.1% over the year while volume moved –6.8%, and unit EBITDA moved –20%, so the spread between price and cost did not hold. On this structure £7.6m–£15m is recoverable, 1.60% of divisional revenue, within a ±32% confidence interval.

EXHIBIT 4 The three levers and the interventions inside them

A • PRICE STRATEGY

£5.6m

+0.80pp of margin • £3.7m–£7.5m • ±34% confidence

The price before anyone negotiates. Set from customer value where a product is genuinely differentiated, and from cost where it is not.

STILL OPEN

B • PRICE STEERING

£2.8m

+0.39pp of margin • £1.8m–£3.7m • ±35% confidence

What survives the negotiation. Discounts, rebates and concessions granted account by account, which vary far more between similar customers than most firms expect.

STILL OPEN

C • PRICING OPERATIONS

£3.5m

+0.50pp of margin • £2.5m–£4.4m • ±28% confidence

What survives the process. Surcharge recovery, service billing, and the lag between a cost change landing and a price change taking effect.

STILL OPEN

REVENUE BASE	PRODUCT LINES • CUSTOMERS	P&L STRUCTURE • SPECIALITY	NETTED AGAINST OVERLAP
£699m	1,000 • 1,000	Central P&L • 75%	–£0.6m

Every bar is on one scale, so a bar twice as long is twice the money. pp is margin points: a point of revenue taken in price is a point of EBITDA margin at this revenue base. Each tag reads share of revenue reached × price move expected on it × share still open. “Still open” is what is left after the share credited to the business today. That share is recorded against each intervention and is an assumption to confirm, not a measurement.

Synthomer public data pack v1.0 (Navoniq market research). Divisional series on the pack's recommended perimeter: FY2025 RNS for 2024-2025, FY2024 RNS for 2023; FY2023 HPPM includes William Blythe. Levers are sized independently against the same revenue base and netted where base-price repositioning and account-level steering would claim the same revenue twice. See the note from Navoniq Group and its partners on the final page.

DIVISION 2 OF 3 • ADHESIVE SOLUTIONS

AS's largest opportunity is how base prices are set, worth £4.4m a year.

Adhesive Solutions earned 11.6% EBITDA margin on £571m of revenue in FY2025. Realised price per unit moved –1.8% over the year while volume moved –1.2%, and unit EBITDA moved +39%, so the spread between price and cost held. On this structure £6.2m–£12m is recoverable, 1.58% of divisional revenue, within a ±32% confidence interval.

DIVISION 3 OF 3 • HEALTH & PROTECTION AND PERFORMANCE MATERIALS

HPPM's largest opportunity is how base prices are set, worth £3.0m a year.

Health & Protection and Performance Materials earned 5.2% EBITDA margin on £469m of revenue in FY2025, against 6.0% as recently as 2024. Realised price per unit moved –5.5% over the year while volume moved –10.4%, and unit EBITDA moved –18%, so the spread between price and cost did not hold. On this structure £4.7m–£9.1m is recoverable, 1.47% of divisional revenue, within a ±32% confidence interval.
